ERGSS

EMERGENCY RESPONSE & GLOBAL SECURITY SOLUTIONS

Data Center Readiness Package

Training, prevention and a clear account of what your department needs, funded by the developer.

A hyperscale campus brings thousands of construction workers, energized switchgear, diesel fuel and large battery energy storage systems to sites often protected by small or volunteer fire departments. Host communities are asked to handle industrial-scale incidents without the training, equipment or plans to do it safely. ERGSS closes the gap.

01

Training

- Battery energy storage fires (NFPA 855)
- Energized electrical equipment and generators
- Large-site search, rescue and accountability
- Incident command for a multi-building campus

02

Fire Prevention & Pre-Incident Planning

- Site walk-through with the fire chief
- Pre-incident plans for each building and energy system
- Apparatus access and water supply review
- Joint drills with the site and its builders

03

Equipment & Capability Needs Assessment

- Apparatus, water supply and battery-fire equipment
- Staffing, mutual aid and hospital capacity
- Written findings for the developer agreement

04 **Fire Station & EOC Design.** When the campus calls for a new station, training ground or emergency operations center, ERGSS advises the owner and architect on space, layout, communications and continuity, from programming through commissioning.

HOW IT IS FUNDED

The developer typically funds the package through the development or community-benefit agreement. ERGSS is independent of equipment vendors, so every recommendation reflects only what your department needs.

WHAT YOU RECEIVE

A written readiness assessment within six weeks of site access, a training schedule for your department, and pre-incident plans your crews can use on the first call.

WHY ERGSS

Founded in 2005, ERGSS fields a cadre of emergency managers, fire officers, paramedics and facility specialists with FEMA Incident Management Assistance Team, Deepwater Horizon and pipeline-spill response experience and HSEEP and CEM credentials. Every program is built on NIMS/ICS and HSEEP.
